

Addition and conversion for customary units of capacity

Addition and conversion for customary units of capacity

Example : 1

Add : 14 cups + 3 cups

Solution :

	Tens	Ones
	1	4
+	0	3
	1	7

So, 14 cups + 3 cups equals **17 cups**

So, answer is 17 cups

Convert 17 cups into fluid ounce

Solution :

1 cup = 8 fluid ounces

17 cups = 8 x 17 fluid ounces

= 136 fluid ounces

So, 17 cups = 136 fluid ounces

Example : 2

Add : 11 pints + 13 pints

Solution :

	Tens	Ones
	1	1
+	1	3
	2	4

So, 11 pints + 13 pints equals **24 pints**

So, answer is 24 pints

Convert 24 pints into cup

Solution :

1 pint = 2 cups

24 pints = 2 x 24 cups

= 48 cups

So, 24 pints = 48 cups

Example : 3

Add : 12 quarts + 24 quarts

Solution :

	Tens	Ones
	1	2
+	2	4
	3	6

So, 12 quarts + 24 quarts equals **36 quarts**

So, answer is 36 quarts

Convert 36 quarts into pint

Solution :

1 quart = 2 pints

36 quarts = 2 x 36 pints

= 72 pints

So, 36 quarts = 72 pints

Example : 4

Add : 13 gallons + 26 gallons

Solution :

	Tens	Ones
	1	3
+	2	6
	3	9

So, 13 gallons + 26 gallons equals **39 gallons**

So, answer is 39 gallons

Convert 39 gallons into quart

Solution :

1 gallon = 4 quarts

39 gallons = 4 x 39 quarts

= 156 quarts

So, 39 gallons = 156 quarts

Example : 5

Add : 23 fluid ounces + 42 fluid ounces

Solution :

	Tens	Ones
	2	3
+	4	2
	6	5

So, 23 fluid ounces + 42 fluid ounces equals 65 fluid ounces

So, answer is 65 fluid ounces

Convert 65 fluid ounces into tablespoon

Solution :

1 fluid ounce = 2 tablespoons

65 fluid ounces = 2 x 65 tablespoons

= 130 tablespoons

So, 65 fluid ounces = 130 tablespoons
