

3 dimensional shapes

Three dimensional Shapes

- 3D Shapes are solid objects that have **three dimensions**.
- The three dimensions are

❖ length

❖ width.

❖ Height

Examples

Cube

Cuboid

Sphere

Cone

Polyhedrons

- ❖ Polyhedrons are **3D shapes**.
- ❖ The polyhedrons are also called the **Polyhedra**.
- ❖ Polyhedrons should have **straight edges**

Examples

Cube

Cuboid

Prism

Pyramid

Curved Solids

- ❖ The **3D shapes** that have **curved surfaces** are called curved solids.

Examples

Sphere

Cone

Cylinder

Pyramid

Properties

There are 3 properties for 3 dimensional shapes. They are

- Faces
- Edges
- Corners or vertices

Faces

Faces are the surfaces on the outside of a shape.

Edges

Edges are the lines where two faces meet.

Corners or vertices

Vertices or corner are where two or more edges meet.

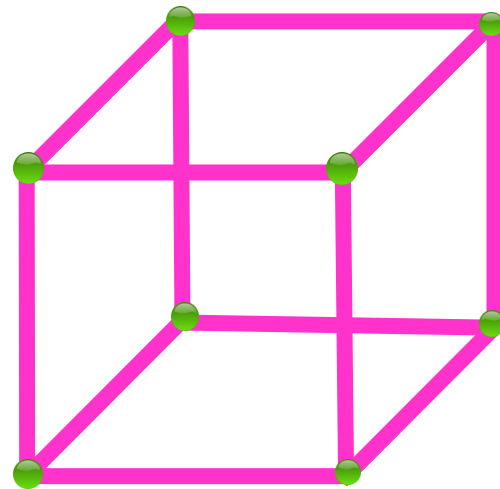

Cube

Faces — 6

Edges — 12

Vertices — 8

Cube

Properties/characteristics:

- It is a **3-D shape**.
- It has **six faces**.
- All **sides** are **equal**.
- It has **8 vertices** and **12 edges**.

Gift box

Dice

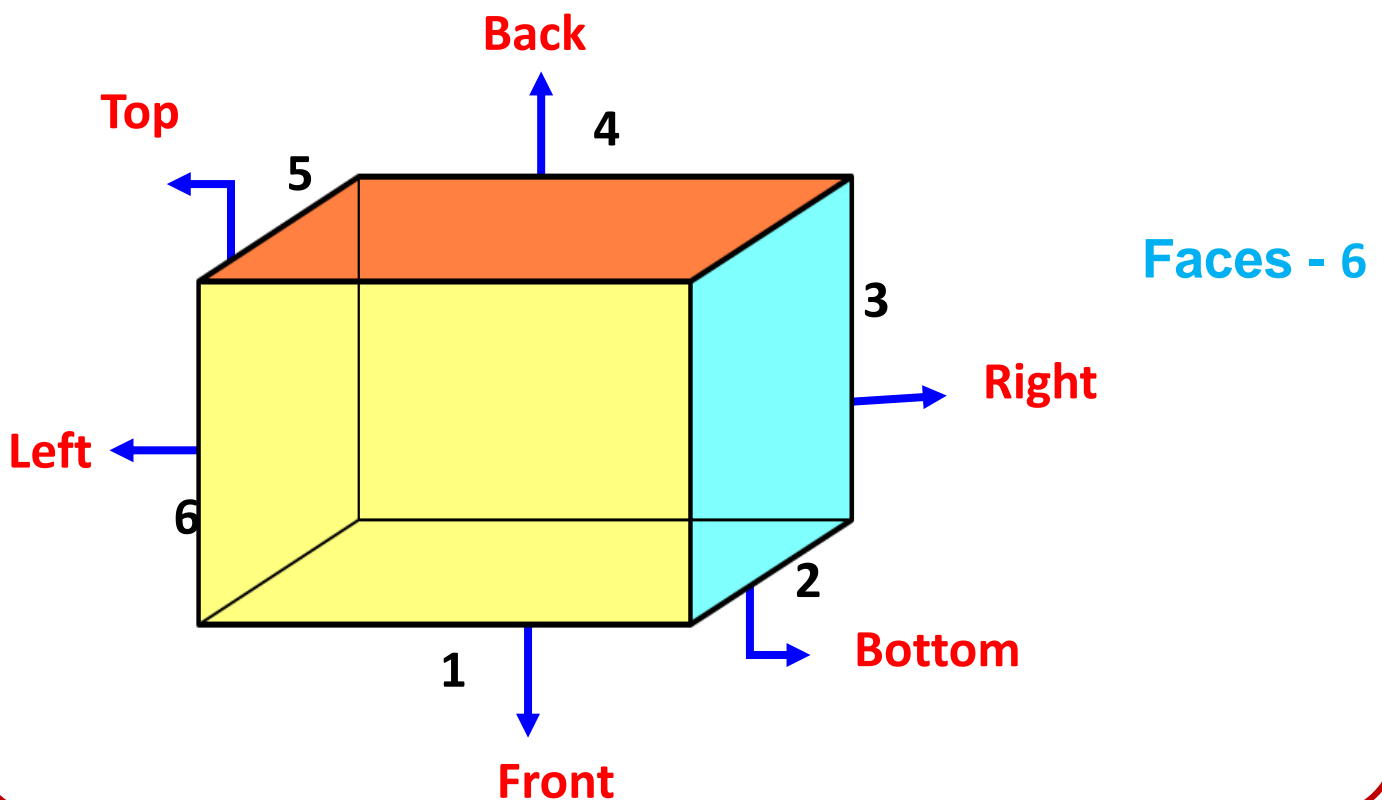

Ice cubes

Dice, Ice cubes , Gift box.

Examples

Cuboid

Edges - 12

Corners - 8

Cuboid

Properties/characteristics:

- It is a **3-D shape**.
- It has **six faces**.
- Its **opposite sides** are **equal**.
- It has **8 vertices** and **12 edges**.

Examples

Bricks, Match box, Book.

Book

Bricks

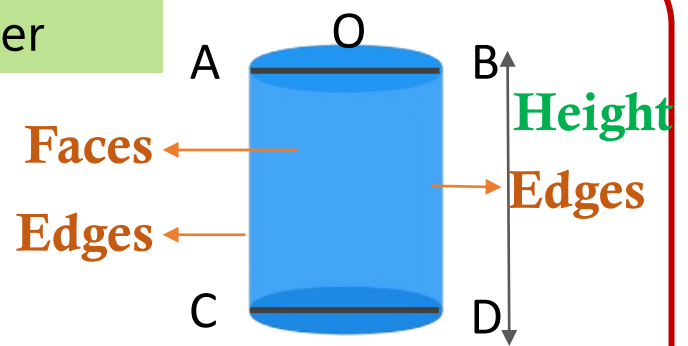

Match box

Cylinder

Properties/characteristics:

- It is a **3-D shape**.
- **Two bases** lie in **upper** and **lower surfaces** in a cylinder.
- It has **3 faces**.
- **Height** is the distance between the **two bases**.
- It has **2 edges** and **no vertices**

Examples

Straw , cylinder.

Straw

Cylinder

Sphere

Properties/characteristics:

- It is a **3-D shape**.
- It has **one surface**.
- **All points** on the **surface** are at the **same distance from the centre**.
- It has **no vertices** and **edges**.

Examples

Laddu , Globe , Ball.

Laddu

Globe

Ball

Cone

Properties/characteristics:

- It is a **3-D shape**.
- **Base** of a **cone** is **circular**.
- The **distance** from the **top of the cone** to the **center of the base** is called as **height**.
- The **distance** from the **apex** to any point lying on the **circumference of base** is called as **slant height**.
- The **height** and **slant height** are **not equal**.

Examples :

Cone ice cream, Party cap.

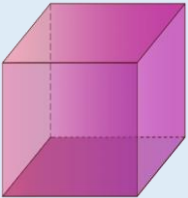

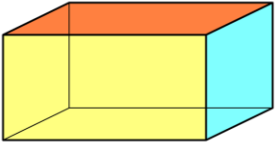

Party cap

Cone ice cream

3D Shape Properties

Lateral surface area
Total surface area

Name of the shapes	Formulas
<p>cube</p> 	<p>TSA = $6a^2$ (sq. units) LSA = $4a^2$ (sq. units) Volume = a^3 (cu. units)</p>
<p>cuboid</p> 	<p>TSA = $2(lw + wh + lh)$ sq. units LSA = $2h(l + w)$ (sq. units) Volume = lwh (cu. units)</p>
<p>cone</p> 	<p>TSA = $\pi r(l + r)$ (sq. units) LSA = πrl (sq. units) Volume = $(1/3)\pi r^2h$ (cu. units)</p>
<p>cylinder</p> 	<p>TSA = $2\pi r(h+r)$ (sq. units) Volume = πr^2h (cu. units)</p>
<p>sphere</p> 	<p>TSA = $4\pi r^2$ (sq. units) Volume = $(4/3)\pi r^3$ (cu. units)</p>
