

Subtraction and conversion for customary units of capacity

Subtraction and conversion for customary units of capacity

Example : 1

Subtract : 14 cups - 3 cups

Solution :

	Tens	Ones
	1	4
-	0	3
	1	1

So, 14 cups - 3 cups equals to **11 cups**

So, answer is 11 cups

Convert 11 cups into fluid ounce

Solution :

1 cup = 8 fluid ounces

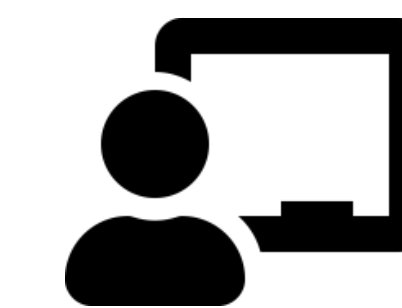

11 cups = 8 x 11 fluid ounces
= 88 fluid ounces

So, 11 cups = 88 fluid ounces

Example : 2

Subtract : 27 pints - 15 pints

Solution :

	Tens	Ones
	2	7
-	1	5
	1	2

So, 27 pints - 15 pints equals to **12 pints**

So, answer is 12 pints

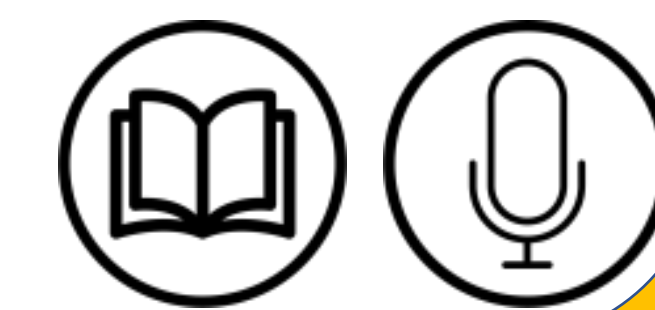

Convert 12 pints into cup

Solution :

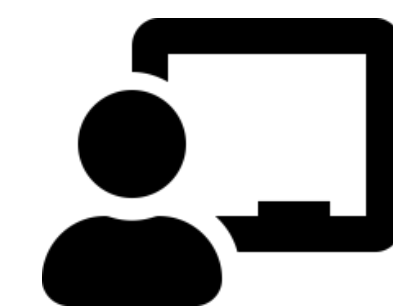

1 pint = 2 cups

12 pints = 2 x 12 cups
= 24 cups

So, 12 pints = 24 cups

Example : 3

Subtract : 49 quarts - 25 quarts

Solution :

	Tens	Ones
	4	9
-	2	5
	2	4

So, 49 quarts - 25 quarts equals to 24 quarts

So, answer is 24 quarts

Convert 24 quarts into pint

Solution :

1 quart = 2 pints

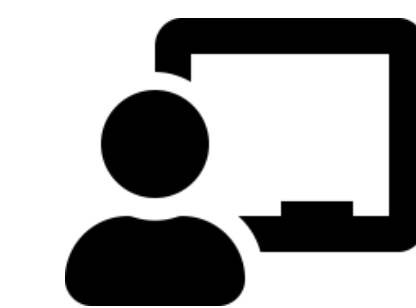

24 quarts = 2 x 24 pints
= 48 pints

So, 24 quarts = 48 pints

Example : 4

Subtract : 68 gallons - 32 gallons

Solution :

	Tens	Ones
	6	8
-	3	2
	3	6

So, 68 gallons - 32 gallons equals to 36 gallons

So, answer is 36 gallons

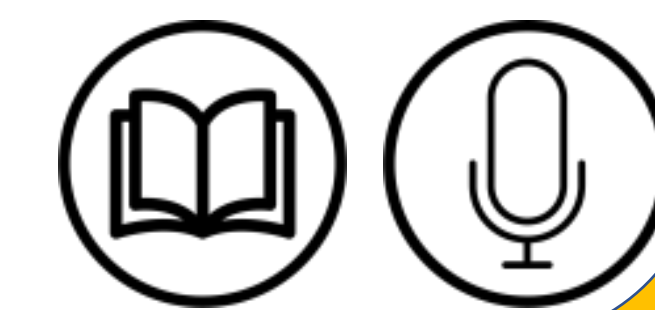

Convert 36 gallons into quart

Solution :

1 gallon = 4 quarts

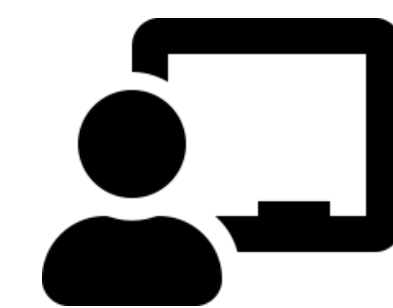

36 gallons = 4 x 36 quarts
= 144 quarts

So, 36 gallons = 144 quarts

Example : 5

Subtract : 76 fluid ounces - 43 fluid ounces

Solution :

	Tens	Ones
	7	6
-	4	3
	3	3

So, 76 fluid ounces - 43 fluid ounces equals to 33 fluid ounces

So, answer is 33 fluid ounces

Convert 33 fluid ounces into tablespoon

Solution :

1 fluid ounce = 2 tablespoons

33 fluid ounces = 2 x 33 tablespoons

= 66 tablespoons

So, 33 fluid ounces = 66 tablespoons
