

## Read the statement and write the answer

1) A tape measure is 32 meters long. If 23 meters are used to measure a room, how much tape is left?

$$\begin{array}{c} \text{32} \\ \hline \end{array} - \begin{array}{c} \text{23} \\ \hline \end{array} = \begin{array}{c} \text{9} \\ \hline \end{array} \text{ meters}$$

2) A road trip begins with a full tank of gas, which allows the car to travel 56 kilometers. After driving for a while, there are only 32 kilometers of gas left. How far did the car travel?

$$\begin{array}{c} \phantom{56} \\ \hline \end{array} - \begin{array}{c} \phantom{32} \\ \hline \end{array} = \begin{array}{c} \phantom{24} \\ \hline \end{array} \text{ kilometers}$$

3) A piece of paper is 66 centimeters long. If 34 centimeters are used to make a card, how much paper remains?

$$\begin{array}{c} \phantom{66} \\ \hline \end{array} - \begin{array}{c} \phantom{34} \\ \hline \end{array} = \begin{array}{c} \phantom{32} \\ \hline \end{array} \text{ centimeters}$$

4) A piece of cloth is 75 millimeters long. If 44 millimeters are used to make a shirt, how much cloth remains?

$$\begin{array}{c} \phantom{75} \\ \hline \end{array} - \begin{array}{c} \phantom{44} \\ \hline \end{array} = \begin{array}{c} \phantom{31} \\ \hline \end{array} \text{ millimeters}$$

5) A piece of wood is 67 centimeters long. After sawing off 22 centimeters, how much wood is left?

$$\begin{array}{c} \phantom{67} \\ \hline \end{array} - \begin{array}{c} \phantom{22} \\ \hline \end{array} = \begin{array}{c} \phantom{45} \\ \hline \end{array} \text{ centimeters}$$
