# Read the statement and Write the answer
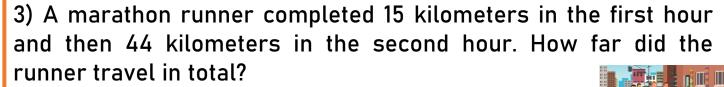

1) John walked 36 meters to the store and then 22 meters to the park. How far did he walk in total?

$$\boxed{36} + \boxed{22} = \boxed{58} \text{ meters}$$

2) A piece of string measures 46 milliliters. If another piece measuring 41 milliliters is added, what is the total length?

$$\boxed{} + \boxed{} = \boxed{} \text{ millimeters}$$

3) A marathon runner completed 15 kilometers in the first hour and then 44 kilometers in the second hour. How far did the runner travel in total?

$$\boxed{} + \boxed{} = \boxed{} \text{ kilometers}$$

4) Tom's garden fence is 51 centimeters long. If he adds another section of the fence that is 15 centimeters long, what is the total length of the fence?

$$\boxed{} + \boxed{} = \boxed{} \text{ centimeters}$$

5) A rope is 65 meters long. If 14 meters are added to it, what is the total length of the rope?

$$\boxed{} + \boxed{} = \boxed{} \text{ meters}$$
