

## Subtract and convert the given appropriate unit

1)  $47 \text{ g} - 21 \text{ g} = \underline{26 \text{ g}}$ .

Convert the answer into **kg**

$$1 \text{ g} = \frac{26}{1000} \text{ kg}$$

$$26 \text{ g} = \frac{26}{1000} \text{ kg} = \underline{0.026 \text{ kg}}$$

4)  $65 \text{ kg} - 21 \text{ kg} = \underline{\hspace{2cm}}$ .

Convert the answer into **g**

2)  $46 \text{ kg} - 31 \text{ kg} = \underline{\hspace{2cm}}$ .

Convert the answer into **g**

5)  $78 \text{ g} - 26 \text{ g} = \underline{\hspace{2cm}}$ .

Convert the answer into **kg**

3)  $54 \text{ kg} - 22 \text{ kg} = \underline{\hspace{2cm}}$ .

Convert the answer into **g**

6)  $97 \text{ g} - 34 \text{ g} = \underline{\hspace{2cm}}$ .

Convert the answer into **kg**
