Read the statement, subtract the given fraction and find the correct answer

1) Ram had $\dfrac{4}{7}$ of a jar of jam and used $\dfrac{2}{5}$ of it.

How much jam is left?

Solution:

$$\dfrac{4}{7} - \dfrac{2}{5} = \dfrac{(4 \times 5) - (2 \times 7)}{7 \times 5} = \dfrac{20 - 14}{35} = \dfrac{6}{35}$$

2) $\dfrac{2}{6}$ of a tank was filled with water. If $\dfrac{1}{4}$ of the water leaked, how much water remains?

3) Mary had $\dfrac{9}{10}$ of a chocolate bar and gave $\dfrac{3}{5}$ Of it to her brother. How much chocolate does Mary have left?

4) $\dfrac{6}{9}$ of a container was filled with juice. If $\dfrac{4}{7}$ of the juice was poured out, what fraction of the container is still filled?
